

# Raising the profile of agricultural biodiversity in public policies

**Isabel López Noriega, on behalf of the Policy Group of Bioversity International**

CCAFS Science Workshop, April 2017

# Common public policy issues

Little integration of agricultural biodiversity in national programmes

Food security programmes rely on the production of a few crops

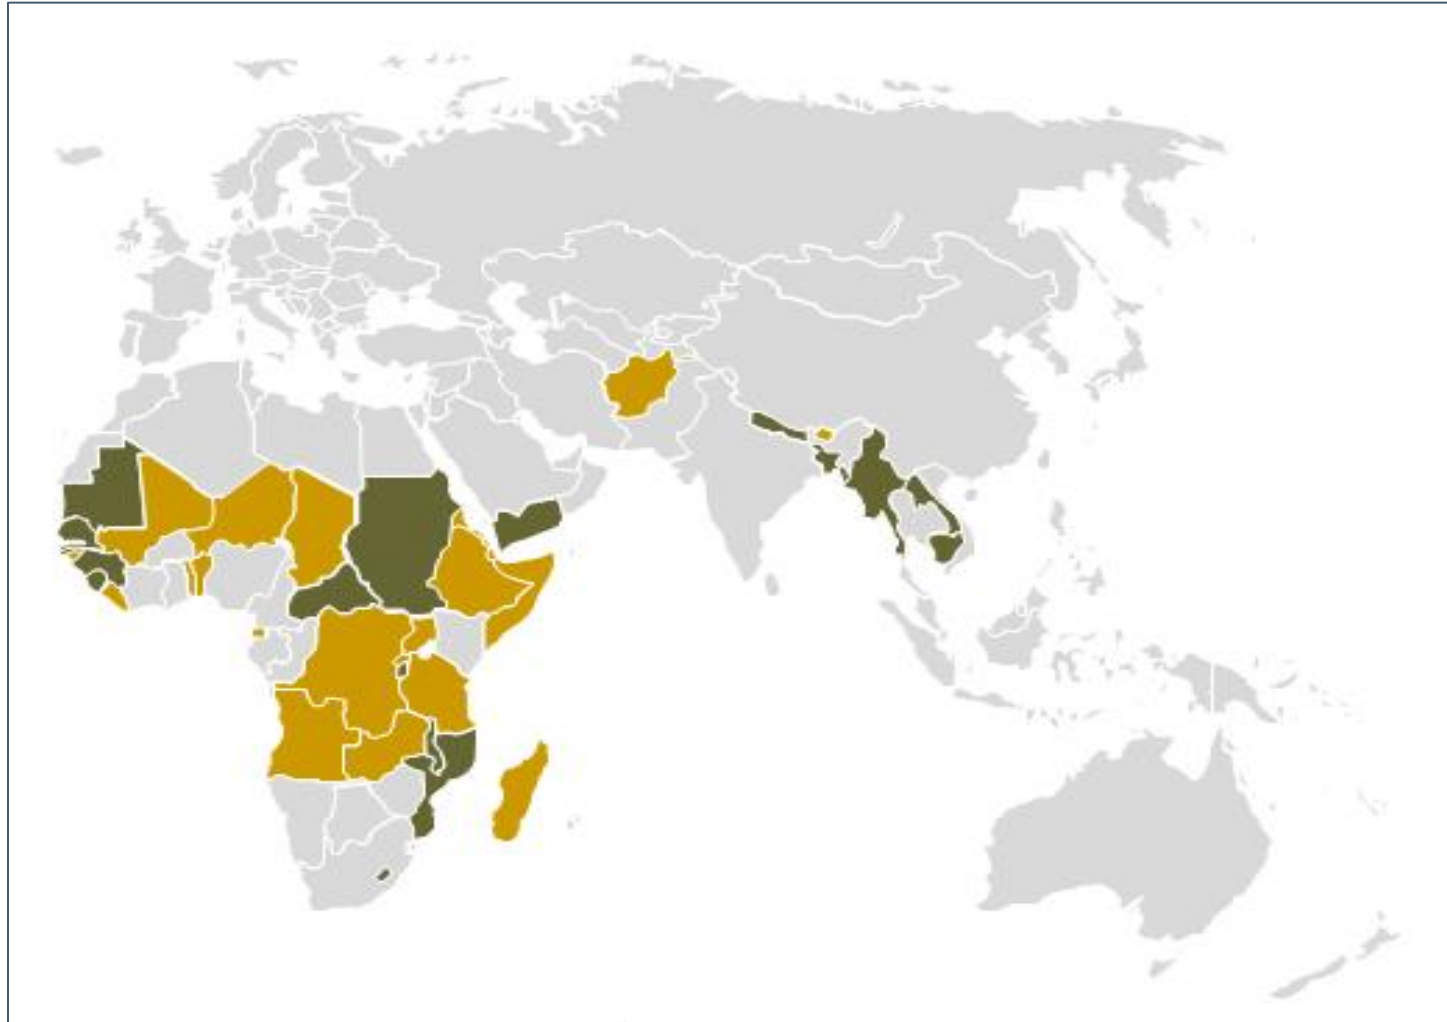

Little public investment in breeding, research and development

Restricted access to genetic resources for food and agriculture

# Agricultural biodiversity in the NAPAs

Source: Bedmar et al. 2015. Countries which have developed a NAPA in yellow. In green, the 19 countries with NAPAs with the highest degree of integration of ABD in their priority activities. In a worldwide map, Haiti would also be represented, in green.

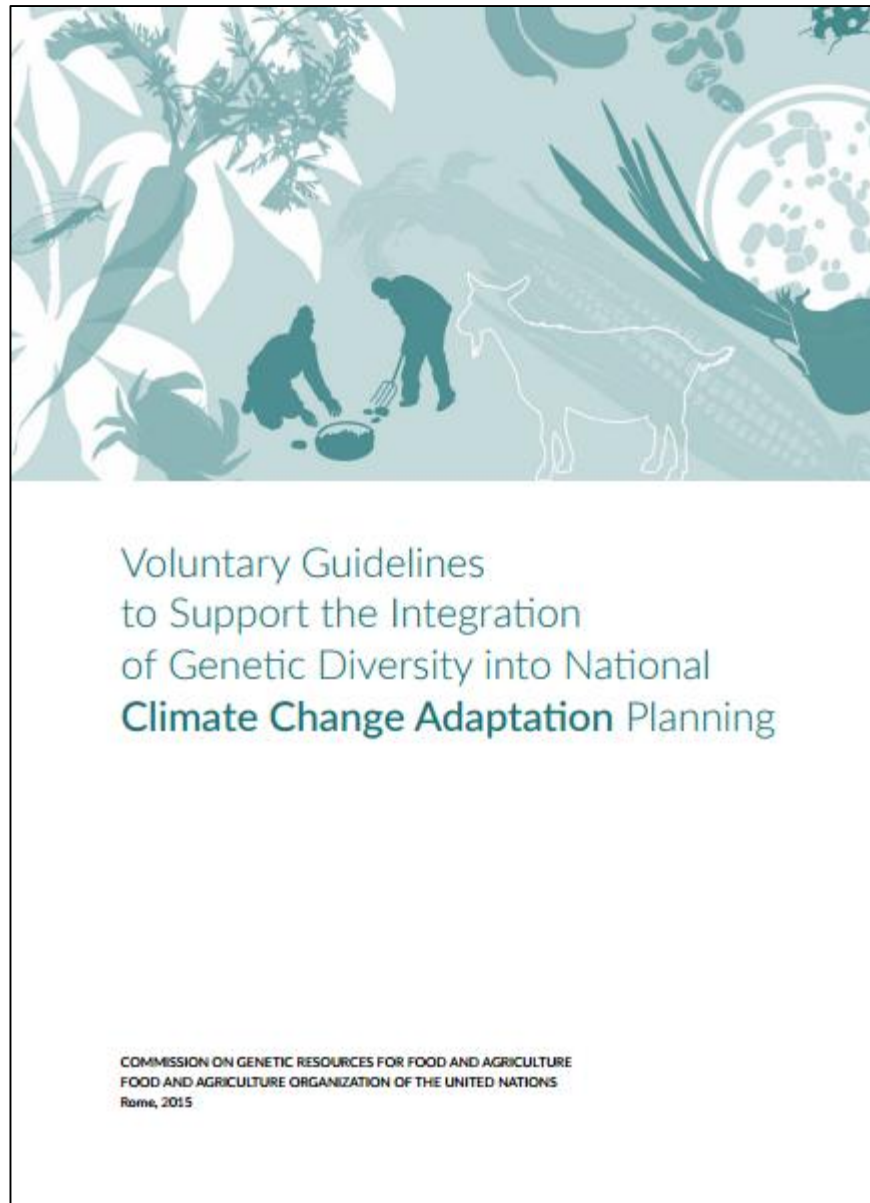

# Generating robust scientific evidence for policy influence

# Engaging in international processes

# Identifying opportunity windows

**Uzbekistan.** Public measures for further reforming and development of agriculture for the period of 2016-2020:

1. Reduction of cotton and wheat production.
2. Increase of fruit trees, vegetables, potatoes.
3. Increased investments in breeding for fruit trees and vegetables.
4. Increased investments for production of seed and planting material for fruit trees and vegetables
5. Expanded curricula for these crops in agrarian universities
6. Plant breeders rights allowed for new varieties of fruit trees and vegetables
